FASTER RESULTS
The innovative ChromaVision Pro Mini doesn’t just deliver colour formulas fast, it also measures finish effects. So you get a complete formula in one go. And, using its Wi-Fi connection in combination with ChromaWeb™ software, you can instantly send data to your mixing room so the new colour can be mixed quicker than ever. Use it with a desktop computer, laptop, tablet – even a smartphone.

EASIER TO USE
This hi-tech new device is much smaller than previous ones so it’s convenient and easy to handle. The full colour, hi-res screen presents information clearly so you get the full picture in a flash. And the touchscreen makes it even easier to use even if you’re wearing gloves. LED lights and sounds also give you immediate and direct feedback on the device status so you’re always in complete control.

MORE ACCURATE THAN EVER
Using over 200,000 formulas as a starting point, ChromaVision® Pro Mini is proven to be more accurate than using a colour box (with roughly 5-10,000 chips). And, because all ChromaWeb formulas are in the cloud, they’re constantly updated with the latest data, meaning you always have the most up to date information.

COLOUR & EFFECT MEASURING
The ChromaVision Pro Mini is the only device which also measures the finish, including pearl and sparkle effect to give a complete formula.

WI-FI CONNECTION TO CHROMAWEB
Use anywhere to optimise workflow. ChromaVision Pro Mini’s Wi-Fi connection means you can transfer data to ChromaWeb software instantly.

DOCKING STATION CRADLE
The innovative docking station cradle means your ChromaVision Pro Mini is always charged. With no cables to plug in it’s also quick and easy to use.

SMALL & EASY HANDLING
It is small and lightweight - so it can easily be operated with one hand and makes overall use and manipulation much simpler.
STYLUS INCLUDED

It also comes with a stylus which the user can use if they prefer.

PROTECTIVE LENS HOOD

The magnetic dust plate ensures a secure fit to protect the sensor lens.

HOW TO USE?

01. ASSESS

Identify the damage and assess refinish requirements.

02. CHECK

Determine the manufacturer and colour code. Check if special pigments are included in the formula as these could lead to higher repair costs.
03. CLEAN

Choose a flat area as close as possible to the damage and clean it ready for colour measurement. Degrease the cleaned surface, then mechanically polish and wipe it clean. Degrease the polished surface once again.

04. MEASURE

Check the car and ChromaVision Pro Mini temperature (should be 15°C–30°C). Calibrate using the white and blue tiles if requested, then take your measurement.

Optional:
Save the sample and manufacturer/colour code details which will then appear in the ChromaWeb™ software.

05. SEARCH

Use ChromaWeb software to search for the best-matching formula. Select your measurement sample from the ChromaVision Pro Mini. Fill-in the manufacturer and colour code details (if not already uploaded). Select the best colour match from the results given.

06. SPRAY

Calculate the amount you will need. Apply RFU (ready for use). Mix the colour, then start spraying.
